PROFILE

Full Stack Web Developer and Product-oriented Engineer with 8+ years of experience building, scaling, and maintaining B2B/B2C web applications, e-commerce platforms, and ERP/CRM integrations (including NetSuite). Specialized in the JavaScript/TypeScript ecosystem with React and Next.js, I typically work with Tailwind, Zustand, Redux Toolkit, tRPC, Zod, Drizzle ORM, PostgreSQL, Redis, Docker, and Auth.js, with hands-on experience designing architecture, data models, APIs, webhooks, and VPS deployment infrastructure. For production environments, I set up and manage the necessary deployment stack using Nginx, CloudPanel, and DNS configuration. I've led end-to-end product development, working both as a freelancer and within Agile (Scrum) teams using tools like Git/GitHub, Jira, and Notion. Focused on delivering scalable, high-performance, and well-documented products, with strong attention to UX, code quality, and environment automation (CI/CD, containers, and production best practices).

SKILLS

HTML / CSS	tRPC	GIT
Javascript / Node.js	React Native	VPS / Linux
Typescript	SQL	Python
React.js	MongoDB	Django
Next.js	Redis	Tailwind
Express.js	Docker	

PROFESSIONAL EXPERIENCE

Freelance

Dec 2022 - Present

Full Stack Developer

Projects: Development of web applications for clients in Argentina, Venezuela, and Spain, covering sectors such as Ed-Tech and E-commerce.

- Designed, developed and maintained web applications using technologies such as React.js, Next.js, TypeScript, Express.js, PostgreSQL, MongoDB, Redis, tRPC, Docker, Django, Angular and .NET, ensuring scalability and high performance.
- Developed and optimized e-commerce platforms using tools such as Shopify, implementing SEO improvements, optimizing the user experience, and ensuring intuitive and seamless navigation to enhance conversion rates and performance.
- Created intuitive user interfaces and designed database schemas in PostgreSQL to ensure high performance and system consistency.
- Configured development and production environments using tools like Git and Docker, implementing efficient CI/CD workflows.
- Planned and prioritized technical tasks using Notion, managing the backlog and defining sprint goals in collaboration with multidisciplinary teams.
- Implemented unit testing with Jest, improving code performance and reducing errors in production environments.
- Integrated RESTful APIs and headless CMS platforms like Sanity to manage dynamic and customizable content.
- Documented technical changes and key processes to ensure agile maintenance and the sustainability of the developed solutions.

Netsuite Developer, ERP & CRM Automations

Development and Optimization of Workflows and Processes in NetSuite for users in Turkey, Brazil, and Mexico.

- Designed and maintained custom scripts in JavaScript and SuiteScript to automate workflows and critical processes, achieving a significant increase in operational efficiency.
- Implemented integrations between NetSuite and third-party systems, ensuring data synchronization and improving the end-user experience.
- Collaborated with cross-functional teams from product, development, and sales, working effectively with distributed teams in Turkey, Brazil, and Mexico.
- Supervised team member performance through 1:1 sessions, performance evaluations, technical training, task assignments, and Merge Request approvals in Git repositories.
- Documented processes and scripts in NetSuite, providing technical support to foster the adoption and management of new functionalities in the platform.
- Led continuous improvement projects in NetSuite, prioritizing user feedback and aligning solutions with business needs.
- Monitored and prioritized support tickets in an Agile environment, managing the task backlog and updating their status in Jira to ensure efficient tracking and resolution.

Vortex Robotica de Venezuela**Aug 2017 - Jul 2018****Full Stack Developer**

Development of Web Applications and E-commerce Platforms tailored to various business needs, focused on scalability and user experience.

- Designed, developed, and maintained web applications and e-commerce platforms using frameworks such as Django, CodeIgniter, and WordPress.
- Implemented interactivity in applications using jQuery and AJAX, enhancing usability and user experience.
- Optimized responsive web interfaces with Bootstrap, ensuring consistent performance across mobile and desktop devices.
- Designed and optimized database schemas with MySQL and PostgreSQL, achieving efficient and reliable data management.
- Collaborated with multidisciplinary teams, delivering scalable web solutions under established quality standards and deadlines, utilizing SCRUM as an Agile methodology.
